College Result Management & Visualization System

Name:	*Enrollment No:*
Kavy joshi	25002171220009
Uday Tukadiya	24002171510035
Piyush Parekh	24002171210105

Introduction & Features

- ***Introduction:***
- This project is a Python-based system used to manage, calculate, and visualize college student results using modern data processing and visualization tools.

- ***Features:***
- Student result management
- Automatic result calculation
- Grade and percentage generation
- Data analysis using NumPy
- Graphical visualization using Matplotlib
- User-friendly interface using Streamlit

Working of Project

- ***Working Process:***
- Admin/Teacher enters student and marks data
- Data is stored in CSV files
- System processes data using NumPy
- Results are calculated automatically
- Visualization graphs are generated using Matplotlib
- Streamlit displays dashboard and results
- ***Flow:***
- User Input → Python Logic → Data Processing → Result Calculation → Visualization → Dashboard

Future Scope

- ***Future Updates:***
- Login system with role-based access
- Cloud database integration
- Mobile application version
- AI-based performance prediction
- Automatic report generation
- Parent monitoring system
- Multi-college system integration
- Smart academic recommendation system

Thank
you!
